

## Margrets Beach - Margret or Conilurus Island

Margrets Bch is another large beach in the area, it has added protection of a large rock groin on the south side of the beach. Anchorage south of this groin is a huge area with good holding bottom in 15-20m out of any currents. The passage to the south that leads through to the mouth of Coppermine Ck is a great shortcut on most tides except spring lows.
